Appendix 1 ............................................................................................................... 28
60% of adults in the Southland region (53,000) take part in sport and recreation in any given week.

Each year, almost 36,000 adults volunteer in sport and recreation.

Each year, around 17,300 adults (20%) take part in one or more sport and recreation events—fun runs/walks, other running/walking events and bike events are the most popular events.

Most adults (62%) are interested in either trying a new sport/activity or doing more of an existing one.
Compared with all New Zealand adults, similar proportions of men and women participated in sport and recreation activities in Southland region.

Southland region adults participate in a similar number of activities (4.1 on average) to the number for all New Zealand adults (4.0).

The most popular sports are:
- Motorsports
- Golf
- Netball
- Squash

The most popular activities are recreational in nature:
- Walking
- Cycling
- Fishing
- Jogging/Running

Almost all participants (97%) took part in their chosen sports/activities casually, either on their own or with others, followed by 20% that took part in regular club competitions.

Around 7 out of 10 participants (69%) took part in sport and recreation activities with an organised group; this was most commonly a group arranged by the people who take part in the activity (50%).

The most common way people pay to participate is on a per visit, entry or hire basis (41%).

Almost 6 out of 10 participants (61%) received coaching, and almost 4 out of 10 (37%) used instructional resources, in the past 12 months to help improve their performance.

Over 8 out of 10 participants (84%) say that enjoyment is the key reason for taking part in activities. A similar proportion of participants (79%) say they take part in activities for fitness and health.

A lack of time is by far the number one reason interested participants give as a reason for not doing more sport and recreation activities, either for trying a new activity (58%), or doing more of an existing activity (66%).
Introduction

This profile presents information about sports participation and volunteering among adults in the Southland region, aged 16 years and over. It is compiled from information collected through the 2013/14 Active New Zealand Survey.

Methodology

The survey

The Active New Zealand Survey consisted of two parts:

- The first part (the Main Survey) was a 30-minute in-home interview, which asked questions around what activities adults do, how often they participate, the different way they choose to take part, where they take part and for what reasons. This part of the survey also asked questions about sport volunteering.
- The second part (the Follow-up Survey) was a further 10-minute interview, which asked questions around history of participation in different activities, their interest in doing more sport and recreation and whether or not they receive coaching of any kind.

Sample

The sample design for the Active New Zealand Survey (ANZS) included some geographic stratification based on the boundaries of the 17 regional sports trusts (RSTs) in existence in 2012 (the time at which the survey was developed). To ensure a minimum of interviews for some of the smaller RSTs, some of the sample was randomly reallocated from some of the larger RSTs. This approach has allowed for a complete set of regional profiles to be written. It should be noted, however, that the Sport NZ series of regional profiles does not include reports for any RST within Auckland Council boundaries. The reason for this is that Auckland Council, in partnership with Sport NZ, has written a report for this geographic area, which includes a geographic breakdown based on the four sub-regional RSTs.

Nation-wide, a total of 6,448 adults aged 16 years and over took part in the 2013/14 ANZS. The 6,448 interviews were completed over a 12-month period from April 2013 to March 2014 to capture participation in seasonal sports and activities. As not everyone selected for interviews took part, some groups (based on gender, age, ethnicity and region) were under- or over-represented in the survey responses. To account for this, the responses in this report are adjusted, or weighted, using information on the make-up of the New Zealand population from the 2013 Census. The response rate for the Southland region was 69%.

Of the 6,448 adults that took part in the 2013/14 ANZS, 296 were resident in the Southland region. Table 1 shows the total number of completed interviews and weighted population numbers for the Southland region.

Table 1: Total number of completed interviews and weighted population numbers for the Southland region

<table>
<thead>
<tr>

<td>136</td>
<td>46,700</td>
</tr>
<tr>
<td>Women</td>
<td>160</td>
<td>41,300</td>
</tr>
</tbody>
</table>

The numbers of sport and recreation participants that answered each question vary according to their frequency of participation in a sport and recreation activity, and/or if they took part in the Follow-up Survey. The unweighted bases for survey respondents that reported participating in sport and recreation activities in relation to the content of this profile report are set out in Appendix 1.

Information reported

In addition to reporting on adults in the Southland region, this report (where possible) provides results for men and women. Sample sizes are too small to look at other sub-populations. Information which is based on sample sizes of fewer than 50 respondents is shown with an asterisk (*) in the table heading or figure legend or title.

The text in this report identifies whether results are statistically significant between adults in the Southland region and those nation-wide, and also between men and women in the Southland region. It should be noted that many large differences are not significant; and so the results may be described as similar. More information about the analysis and statistical significance of findings is outlined in Appendix 1.

---

1 Aktive Auckland at this point was still in its formative stages. Aktive Auckland follows the Auckland Council model and now provides regional leadership including for the four other Auckland-based RSTs – Sport Auckland, Sport Waitākere, Counties-Manukau Sport and Harbour Sport.
Where appropriate in this report, an estimate of the number of participants is included. These population estimates are derived using population information from the 2013 Census.

The results in this report are subject to rounding error. In some cases, percentages that should sum to 100% sum to just under or over 100%. In other cases, the estimated number of participants by sub-group (e.g., men and women) may not add up to all participants.

**Definition of sport**

For this report, sport is defined broadly and is inclusive of the different ways people participate, from casual participation through to organised competition, and includes active recreation like going for a mountain bike ride. Participation is irrespective of intensity, duration and frequency.

**Southland**

In this report, the Southland region refers to the geographic area serviced by the regional sports trust Sport Southland.
Participation in sport and recreation activities over different timeframes, including walking

Around 9 out of 10 adults aged 16 years and over in the Southland region (90.5%, or around 80,000 people) took part in one or more sport or recreation activities over 12 months (see Table 2). The proportions who took part in at least one activity decrease as the timeframe shortens (ie, from year to month to week):

- over 4 weeks the figure is 77.5% (68,000 adults)
- over 7 days it is 60.3% (53,000 adults), which is lower than the level of participation for all New Zealand adults.

A higher proportion of women than men have participated on a weekly basis in the Southland region.

Participation in sport and recreation activities over different timeframes, excluding walking

Walking is a popular activity for most adults and influences overall participation levels. When walking is excluded from the participation figures, the proportion of adults who took part in at least one activity was lower across all three timeframes. The differences are more noticeable as the timeframes shorten.

When walking is excluded, the participation figures for all adults in the Southland region were:

- over 12 months – around 8 out of 10 (80.3%, 10 percentage points lower)
- over 4 weeks – over 6 out of 10 (63.7%, 14 percentage points lower)
- over 7 days – over 4 out of 10 (42.8%, 18 percentage points lower).

Across the yearly and monthly timeframes, participation levels were similar compared with all New Zealand adults and also for women and men within the region. Over a week, however, participation is lower compared with all New Zealand adults, although it is again similar among men and women within Southland region (see Table 2).

Popular Sport and Recreation Activities

This section looks at participation in different sport and recreation activities. It shows the proportion of adults in the Southland region who participated in each activity (over 12 months), irrespective of the intensity, duration or frequency of the activity undertaken.

Figure 1 presents the 20 sport and recreation activities with the highest participation levels among adults in the Southland region, while Table 3 presents the top 10 activities for men and women.

Walking was the most popular activity, with just under 5 out of 10 adults (48.9%) participating over 12 months. Almost 4 out of 10 men (36.6%) and just over 6 out of 10 women (62.7%) went walking.

For men, the most popular activity was walking, with cycling (34.2%) and fishing (32.9%) making up the top three activities. For women, walking, equipment-based exercise (28.6%) and jogging/running (27.0%) made up the top three.

Seven of the top 10 activities were the same for men and women: walking, cycling, fishing, snow sports, swimming, jogging/running and tramping.

The activities that featured in the top 10 for men, but not women, were hunting, motorsports and golf (bolded in Table 3). The activities that featured in the top 10 for women, but not men, were equipment-based exercise, pilates/yoga and aerobics.

Figure 1: The 20 most popular sport and active recreation activities participated in over 12 months in the Southland region

Notes:
(1) Cycling includes mountain biking and cycling.
(2) Equipment-based exercise includes the use of exercise equipment (e.g., exercycles, treadmills, weights) at home or at the gym.
(3) Fishing includes freshwater and marine fishing.
(4) Pilates/yoga includes both at home or at the gym/class.
(5) Dance includes several dance genres (e.g., ballet, hip-hop, ballroom, modern, tap). It does not include club/rave/disco.
(6) Includes both indoor and outdoor versions of the activity.

Notes:
(7) Snow sports includes skiing and snowboarding.
(8) Callisthenics includes callisthenic exercise classes, exercises at home or at the gym.
(9) Hunting includes hunting and deerstalking/pig hunting.
(10) Other exercise does not include equipment-based exercise, pilates/yoga, aerobics or callisthenics.
(11) Motorsports includes cars, karts and motorcycles.
(12) Martial arts includes judo, karate, taekwondo and other martial arts.
This section shows the number of sport and recreation activities that adults in the Southland region took part in over 12 months.

On average, adults in Southland region took part in 4.1 activities over the past 12 months, which is similar to the national average of 4.0 (see Table 4).

Over 7 out of 10 adults (73.9%) participated in at least two sport and recreation activities over 12 months. Just under 6 out of 10 (57.9%) participated in three or more activities.

Both these rates are comparable to the rates for all New Zealand adults. The numbers of activities and participation in two or more, and three or more activities are also similar for men and women in the Southland region.

2 Averages are calculated for all adults, including those who did not take part in any activities.
Ways Participants Take Part in Sport and Active Recreation

This section shows the ways in which participants in the Southland region took part in sport and recreation. This includes whether they took part casually or in organised activities, and whether they took part in teams or groups, as well as whether or not and how they paid to take part in their chosen sports/activities. It also describes membership of clubs and gyms, and participation with coaches and instructors.

Different ways participants take part

Almost all participants (96.7%) in the Southland region took part in their chosen sports/activities casually, either on their own or with others. Around 2 out of 10 (20.0%) took part in regular club competitions, while over 1 in 10 (14.7%) took part in short-term organised competitions and 1 in 10 (9.1%) took part in a one-off or series of events (see Figure 2).

The ways in which all adults in the Southland region participated are similar to those for all New Zealand adults. However, more men than women in the Southland region took part in regular club competitions.

</table>

Notes: Respondents could provide more than one answer. Small survey sub-samples. Use results with caution.
Payment types

Around 9 out of 10 participants (90.4%) in the Southland region took part in one or more activities over 12 months without paying ie, it was free to do so (see Table 5).

The most common way people paid to take part is on a per visit, entry or hire basis, with just over 4 out of 10 (41.4%) doing so. This is followed by similar proportions (almost 2 out of 10 each) that paid by way of membership at a sport or physical activity club (18.8%) and membership at a gym, swimming pool or recreation centre (15.6%), and similar proportions again (almost 1 in 10 each) that paid for a concession card (7.5%) or paid entry costs for a competition or event as an individual or team member (6.5%).

Compared with all New Zealand adults, similar proportions of adults in the Southland region paid to participate in each of the different ways, and were also similar for both women and men in the Southland region.

Different groups that participants take part with

Around 7 out of 10 participants in the Southland region took part in sport and recreation activities with an organised group in the past 12 months (30.9% of participants had not participated with any organised group or team). Where they did so, this was most commonly a group arranged by the people who take part in the activity (50.1%, see Table 6). This was followed by just over 2 out of 10 (21.9%) that participated with a sports team that is part of a sports club, and almost 1 in 10 that participated either in a work-related sports team (6.4%) or an organised group set up by an organisation such as a local council (6.2%). Small numbers (3.4%) took part in another type of sports team, like a church team.

Compared with all New Zealand adults, more adults in the Southland region participated in some sort of organised group. Among Southland region participants, more men than women participated with a sports team that is part of a sports club.

Notes: Respondents could provide more than one answer. Small survey sub-samples. Use results with caution.
Membership of clubs, gyms and recreation centres (over 12 months)

This part of the report looks at participants’ membership of clubs, gyms and recreation centres. Participants in the Southland region were asked about memberships they’d had in the last 12 months in order to take part in their chosen sports/activities.

Just over 4 out of 10 participants (42.3%) in Southland region were members of at least one club, gym or centre in the last 12 months (see Table 7). Just under 3 out of 10 (28.6%) were members of a sport or physical activity club and almost 2 out of 10 (15.5%) were members of a gym or fitness centre. Fewer than 1 in 10 (2.7%) were members of a community leisure or recreation centre.

The profile of participants in Southland region is similar to that for all New Zealand adults, and for men and women within the region.

Table 7: Membership of a club, gym or centre over 12 months

</tbody>
</table>

Notes: Respondents could report being a member of each of the four types of club. Small survey sub-samples. Use results with caution.
Participation with instructors and coaches

This part of the report shows the proportion of participants in the Southland region who received instruction from a coach, instructor, teacher or trainer in the last 12 months for one or more of their chosen sport and recreation activities. It also shows the proportion of participants who used instructional resources (tapes, books, videos or web instruction) to help improve their performance.

Around 6 out of 10 sport and recreation participants (60.5%) in Southland region had received instruction or coaching in the last 12 months to help improve their performance (see Figure 3).

The figure is similar to the rate for all New Zealand adults, and for both men and women within Southland region.

Use of instructional resources (online or other)

Almost 4 out of 10 participants (36.7%) in Southland region used instructional resources (tapes, books, videos or web instruction) to help improve their performance (see Figure 3).

This is also comparable to the rate for all New Zealand adults, and is similar for both men and women within the region.

Figure 3: Receipt of coaching and use of instructional resources by participants in the Southland region

---

1 The results in this section are from a question in the Follow-up Survey, and so are based on a slightly smaller sample size (see the Introduction for more information).
Where People Participate in Sport and Active Recreation

Location of participation

This section looks at the facilities and settings where participants in the Southland region took part in their sport and recreation activities.

Participants were asked which man-made facilities and natural settings they had used for sport or recreation in the last 12 months. People could mention more than one facility/setting for each of their sport and recreation activities. Note these settings may be outside the region in which participants live.

**MAN-MADE FACILITIES** included indoor and outdoor pools and sports facilities, indoor facilities not mainly used for sport (eg, community or school halls), stand-alone gyms/fitness centres, people’s homes, and paths, cycleways and walkways in towns/cities.

**NATURAL SETTINGS** included parks in towns/cities, off-road bike trails and walking tracks, countryside and farmland, bush and forest, and lakes, rivers and the sea.

Just under 9 out of 10 participants (87.5%) in Southland region took part in activities at one or more man-made facilities, with a similar proportion (85.8%) taking part in one or more natural settings (see Figure 4).

These rates are similar to those for all New Zealand adults. Within Southland region, men were as likely as women to participate at both man-made facilities and in natural settings.

**Participation at different types of man-made facilities**

The top three man-made facilities used for sport and recreation by participants in Southland region were: *paths, cycleways and walkways in towns/cities* (53.9%); *indoors or outside at a participant’s or someone else’s home* (35.7%); and *outdoor sports facilities* (33.9%).

Similar proportions of participants (around 2 out of 10) took part at *indoor sports facilities* (22.9%), *indoor pools/aquatic centres* (21.4%) and *gym/fitness centres* (19.8%), while 1 in 10 took part at *indoor facilities not used mainly for sport or recreation, like school and community halls* (10.7%, see Table 8).

This profile of participation at man-made facilities is similar to that for all New Zealand participants. However, within Southland region, women were more likely than men to have taken part in their chosen activities *indoors or outside at their own or someone else’s home and at outdoor pools.*

**Participation in different types of natural settings**

The top three natural settings used for sport and recreation by participants in Southland region were: the *bush or a forest* (38.8%); *parks in towns/cities* (36.5%); and in the *countryside or over farmland* (35.9%). Similar proportions of participants (around 3 out of 10 each) also took part on *off road bike trails or walking tracks* (33.6%), *by a river* (30.3%) and *on or in a lake* (27.0%, see Table 8).

Compared with all New Zealand participants, more Southland region participants took part in sport and recreation activities on *or in a lake and on or in a river,* while fewer participated at *a beach or by the sea and in or on the sea.*

Participation in the different types of natural settings was similar among men and women.

Notes: Respondents could provide more than one answer. Small survey sub-samples. Use results with caution.
Reasons for taking part

The most common reason participants in Southland region gave for taking part in sport and recreation was for enjoyment (83.6%), followed by fitness and health (79.3%) and social reasons (50.4%). Other reasons were cultural reasons (34.8%), low cost (23.4%), convenience (19.4%) and sport performance (18.4%, see Figure 5).

Compared with all New Zealand adults, fewer Southland region participants took part in sport and recreation for reasons of fitness and health, low cost and convenience. However, the reasons for participation were similar for men and women within Southland region (see table to the right).

Figure 5: Reasons for participating in sport and activity recreation
Participation in Events

This section shows how many adults in the Southland region participated in organised sport and recreation events in the last 12 months. Events included walking and running events, multi-sport events, bike events, fishing events, swimming events and Masters sports events. People could also mention other types of events. Note the events participants took part in may have been held outside the region in which adults live.

Around 2 out of 10 adults in Southland region (19.7%, or around 17,300 people) participated in at least one sport or recreation event in the last 12 months (see Figure 6). This is comparable to the rate for all New Zealand adults. Also, within the region, men were just as likely as women to have taken part in at least one event.

This is comparable to the rate for all New Zealand adults. Also, within the region, men were just as likely as women to have taken part in at least one event.

Types of events participated in (over 12 months)

Fun runs/walks and other running/walking events such as half marathons, marathons and 10km races were the most popular types of sport and recreation events for all adults in Southland region, as they were for all New Zealand adults. Other types of events tournaments were the next most popular, followed by bike events (see Table 9).

Other types of events, fun runs/walks and bike events were the most popular events for men, while fun runs/walks and other running/walking events were the most popular among women.

Notes: Other types of events included a range of tournaments and competitions such as golf, sailing and tennis. Fewer than five events identified due to small survey sub-samples. Use results with caution.
Interest in, and Barriers to, More Sport and Active Recreation

This section looks at interest in, and the barriers to, participating in more sport and recreation. The first part looks at any interest among all adults (both participants and non-participants) in the Southland region, while the second focuses on interest among participants.

Participants were asked two questions – were they interested in doing more of any one of the activities they did over 12 months, and were they interested in trying any one activity they had not done in the last 12 months. Non-participants were only asked the second question. Interested respondents were then asked what one thing prevented them from doing the activity(ies) they were interested in.

Interest in trying new, or doing more, sport and recreation activities (all adults)

Just over 6 out of 10 adults (61.8%) in Southland region were interested in either trying a new sport or recreation activity or doing more of an existing activity (see Figure 7). This figure is similar to that of all New Zealand adults, and for both men and women within Southland region.

Table 10 and 11 show that, among participants in Southland region, just under 4 out of 10 (38.1%) were interested in trying a new activity. Table 11 shows that 5 out of 10 (50.7%) participants were interested in doing more of an existing activity.

In both cases the levels of interest are comparable to the rates for all New Zealand participants in sports and recreation, and are similar for both men and women within Southland region (apparent differences are not statistically significant).

Figure 7: Interest in trying a new activity or doing more of an activity (all adults)
Interest in trying new activities

Adults in Southland region who were interested in trying new activities identified over 50 different activities they would like to try, and so the number of people mentioning each activity was small.

Looking at the activities adults were interested in trying, golf and cycling were the most popular (see Table 12).

Barriers to trying new activities

The top three barriers stopping adults in Southland region who were interested in trying new activities from trying them were a lack of time, too costly/can’t afford and poor health/disability/injury. These are the same top three barriers as for all New Zealand adults that are interested in trying new activities. No-one to do the activity with is the only one of the top five barriers for interested adults in the Southland region that is not in the top five for all New Zealand interested adults (see Table 13).

These top three barriers were also the same for men, while women also a lack of nearby facilities/parks and not having anyone to do activities with among their top five barriers.

The main time barriers for adults in Southland region wanting to try a new sport or recreation activity were due to work commitments, and family commitments related to childcare responsibilities. The main costs that were a barrier to adults in Southland region were the costs of buying or hiring the equipment needed, entry to recreation centres/swimming pool/facilities and travel.

Note: Fewer than five barriers identified due to small survey sub-samples. Use results with caution.
Interest in doing more of existing activities

Sport and recreation participants who were interested in doing more of existing activities identified almost 40 different activities they were interested in doing more of and so, again, the number of people mentioning each activity was small.

Looking at the types of activities participants were interested in doing more of, walking and cycling were the most popular activities, followed by fishing and jogging/running (see Table 14).

Men were most interested in doing more walking and fishing. Women were most interested in doing more walking and cycling.

Barriers to doing more of an existing activity

The top three barriers stopping interested participants in Southland region from doing more of an existing activity were overwhelmingly a lack of time, followed by no facilities/parks nearby and poor health/disability/injury (see Table 15).

A lack of time was the main barrier for both men and women, with poor health/disability/injury also among the top three barriers for both. Men also identified no facilities/parks nearby as one of their top three barriers and women identified access was a barrier.

The main time barriers for adults in Southland region wanting to do more of an existing sport or recreation activity were work commitments, family commitments both related and not related to childcare responsibilities.

Volunteering in Sport and Active Recreation

Volunteering in sport and recreation (among all adults)

Just over 4 out of 10 adults in Southland region (41.2%, or around 36,000) took on one or more volunteer roles to support a sport and recreation activity in the last 12 months (see Table 16). The roles included coach/trainer/teacher/instructor (coach/instructor), referee/judge/official/umpire (officiating roles), administrator/secretary/committee member (administration roles), parent helper and other roles.

Volunteering levels among Southland region adults are similar to the levels among all New Zealand adults, and similar proportions of men and women volunteered (apparent differences are not statistically significant).

Note: Respondents could provide more than one answer.

Most common volunteer roles

Parent helper (24.2%) and coach/instructor (15.3%) were the two most common volunteer roles among adults in Southland region, followed by officiating and administration roles (see Figure 8 and Table 17).

Compared with all New Zealand adults, similar proportions of adults in Southland region volunteered in each of the different roles, and within the region, women were just as likely as men to volunteer in each of the roles (apparent differences are not statistically significant).

Among the 41.2% of adults who volunteered, just under 6 out of 10 (58.8%) were parent helpers, while almost 4 out of 10 (37.1%) were coaches/instructors (see Table 17). The profile of volunteers is again similar to that of all New Zealand volunteers, and among men and women in Southland region.

Notes: Parent helper tasks may include providing transport for their own or for other children by carpooling, organising refreshments, washing uniforms and fund-raising. Other roles may include lifeguard/guide, general support or assistant, etc. Respondents could provide more than one answer.
Regional Comparisons

The tables that follow provide an overview of key findings for each region of New Zealand serviced by the RSTs (including those within Auckland Council boundaries, and Auckland combined).

**Black percentages** indicate no significant difference (at the 95% confidence level) from the national results.

**Green percentages** indicate a significant higher percentage than the national result.

**Red percentages** indicate a significant lower percentage than the national result.

Appendix 1

Base sizes and participant types

Unweighted bases for survey respondents

The following table shows the unweighted bases for survey respondents in the Southland region that reported participating in sport and recreation activities in relation to the content of this profile report.

Throughout the report different base sizes are used for the analysis. The different base sizes are due to:

- the different number of respondents in each of the Main and Follow-up Surveys, and these surveys asked different questions
- the different questions respondents were asked as a result of their answers to questions about participation over different timeframes (i.e., over 12 months, over 4 weeks (for ease of reading this is referred to as once a month in the report), over 7 days (referred to as once a week), and also their volunteer status.

The numbers that answered each question vary according to their frequency of participation in a sport and recreation activity, and/or if they took part in the Follow-up Survey.

Table 18: Unweighted survey bases of adults who participated in sport and recreation activities, in the Southland region

</tbody>
</table>

Participant types

In this report there are two different bases:

- those who took part in at least one sport/activity (excluding gardening) in the last 12 months
- those who took part in at least one activity (excluding gardening) at least once a month.

The unweighted base excludes a random selection (approximately 50%) of walkers and swimmers. The weighted base accounts for these randomly excluded participants. See the technical report for more information.

Participant logo – this logo is used to identify sections that report on either of these types of participants.

Statistically significant results

Figures from sample surveys like ANZS are subject to variation that arises from using a randomly drawn sample, rather than surveying the total population of interest. The extent of this variation falls within known ranges and is expressed as a confidence interval. Confidence intervals for ANZS have been calculated at the 95% level, which means that 19 times out of 20 we expect the true value to be within the lower and upper intervals. The technical report provides more on the approach to calculating confidence intervals.

Confidence intervals are not reported in this document; however, the report text does identify whether or not groups are significantly different in terms of their participation (i.e., more or less likely).
Notes on Definitions of Key Variables

Main reasons for participating
Those who answered questions about why they participated in different sports/activities were prompted on a showcard with a range of possible reasons. For each activity, respondents could choose more than one of the prompted reasons and/or provide other reasons. Specific reasons were grouped under more generic headings on the showcard; these are reported on in this report. Specific reasons will be reported in the future. The following table shows the reasons that appeared on the showcard.

<table>
<thead>
<tr>
<th>Generic reason</th>
<th>Specific reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fitness and health</td>
<td>To keep fit (not just to lose weight)</td>
